[github.com/Luckydog03](https://github.com/Luckydog03)

832-477-7060

Computer Science graduate from Colorado State University, skilled in Java, Python, and web development. Experienced in agile environments, proven leadership, and strong problem-solving capabilities. Passionate about developing innovative software solutions, contributing positively within collaborative teams, and open to cleared work.

## RELEVANT EXPERIENCE

---

### Web Developer

/ More Coaching

March 2026 - Current

- > Sole engineer responsible for end-to-end UI/UX design, front-end development, and backend integration for email request handling.
- > Designed and implemented the website architecture independently, ensuring usability, responsiveness, and maintainability.

### Lead/Pastry Chef

/ The Lodge

March 2025 - Current

- > Lead daily kitchen operations in a high-volume restaurant environment while maintaining quality, consistency, and efficiency.
- > Manage grill and sauté stations while coordinating shift execution through task delegation and team communication.
- > Developed and introduced dessert menu offerings to expand the restaurant's culinary program.

### Tech Consultant - Intern

/ FireBird Technologies inc.

December 2024 - February 2025

- > Developed a Python pipeline to detect and aggregate wildfire perimeters over time using spatial intersection techniques with GeoPandas and Shapely.
- > Collaborated remotely with a distributed team through agile meetings, code reviews, and technical troubleshooting.

## RELEVANT EXPERIENCE

---

### Teaching Assistant

/ Colorado State University

August 2023 - December 2024

- > Mentored undergraduate students on academic pathways, internships, python and java coding practices and data analytics using pandas.

## EDUCATION

---

### Bachelor of Science in Computer Science Business Administration Minor

Colorado State University  
2024

### Study Abroad

Korea University  
2022

## COURSEWORK EXPERIENCE

---

### Object Oriented Design

- > Implemented a chess game web application using object-oriented analysis and design principles; leveraged GitLab for version control, issue tracking, and continuous integration while collaborating in an agile team environment.

### Software Engineering

- > Completed a team-based, Agile-driven software engineering course using Scrum, test-driven postman development, CI/CD, and web development tools to create a GPS application.

832-477-7060

Computer Science graduate from Colorado State University, skilled in Java, Python, and web development. Experienced in agile environments, proven leadership, and strong problem-solving capabilities. Passionate about developing innovative software solutions, contributing positively within collaborative teams, and open to cleared work.

## COURSEWORK EXPERIENCE

---

### Mixed Reality Design

> Studied Virtual Reality design, development and theory by creating a VR game in a 3 man team using Unreal Engine 5.

### Cyber Security

> Studied computer security, covering cryptography, authentication, access control, database and network security, intrusion detection, denial-of-service and buffer overflow attacks.

### Databases

> Studied the theory and implementation of database systems, focusing on data modeling, relational design, SQL, transactions, and security rather than commercial DBMS platforms.

### Algorithms

> Studied algorithm design and analysis techniques including greedy algorithms, dynamic programming, divide-and-conquer, and graph algorithms (DFS, BFS, shortest paths, spanning trees), with an emphasis on time complexity, problem reductions, and computational complexity classes (P, NP, NP-Complete).

## EXTRACURRICULAR

---

### Natural Sciences College Council

> Advised the Dean's office on new academic policies and procedures, influencing decisions affecting over 4,000 students.

### Brackey's Game Jam 2025.1

> Collaborated in a two-person team to design and develop a tower defense game using Unity within a one-week timeframe.

### Gamedev.js Game Jam 2025

> Collaborated in a two person team to design and develop a top down level based RPG in a two week timeframe.

## LANGUAGES

---

> Java  
> Assembly  
> C, C++, C#  
> Python  
> SQL

### Web Development tools:

> ReactJS  
> NextJS  
> NodeJS  
> TypeScript
